Subject: *NEW* Quality Data Implementation (QDI) User Group starting December 21, 2022 to support evolving standards discussions in quality measurement

The [QDM User Group](#) is expanding scope and changing its name to accommodate the wider breadth of data models and standards available for expressing quality measures. With the coming move to FHIR standards for quality measurement, the group has seen an increase in discussion around the use of various FHIR models, especially QI-Core. To accommodate these discussions and to increase implementer participation to address real-world data availability, we have updated the user group charter to allow for a wider scope of user group discussions. The updated group name and the extended meeting time (3:00 to 4:30 pm ET) reflects this broader scope.

All changes will be effective on the December 21, 2022 QDI meeting.

Please visit the eCQI Resource Center calendar page (<https://ecqi.healthit.gov/calendar>) for more information and to register.
